

As you make your shopping list for the September Pollinator Plant Sale, consider these beauties! They all provide nectar for adult pollinators or foliage for caterpillars.

This was a tough year for keeping potted plants alive. They really wanted to dig their roots into cool soil. I recorded 163°F on the plastic pots one afternoon in July and 134.6°F on the concrete.

Check back the week before the sale as we will post an updated list. We have many plants in quantities too small to list as available.--Kerry

Amorpha fruticosa False Indigo

Observe these stunning flowers up close to appreciate their intricacy! This fantastic shrub fixes nitrogen from the atmosphere with the help of soil bacteria. It is also a host plant to the caterpillars of a whopping 29 species of moths and butterflies in the Dallas area. Allow lots of room as this one grows wide rather than tall. It will tolerate occasional flooding and may need supplemental water in the driest weeks of summer.

Image: K. Gray-Harrison

Aristolochia fimbriata Pipevine

Although this plant's native habitat is South America, our local Pipevine Swallowtail butterflies think it is great. Caterpillars will chew down the leaves and stems quickly, so buy lots!

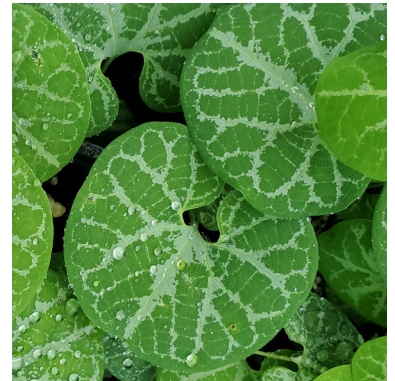

Image: K. Gray-Harrison

Rivina humilis Pigeonberry

These tough shade tolerant plants are native to Texas. They have buds, small flowers, and shiny glassy red berries present on the plants at the same time.

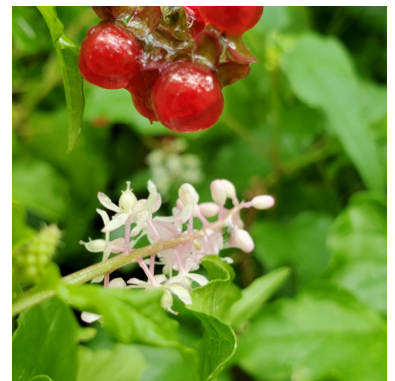

Image: K. Gray-Harrison

Not pictured:

Amsonia tabernaemontana **Texas Bluestar** Our plants on the grounds did not produce many seeds this summer, but these plants germinated from old stored seeds...and they all came up!

Echinacea pallida var. *tennesseensis* (was *Echinacea tennesseensis*) **Tennessee Coneflower**

Echinacea pallida **Pale Coneflower**
